

BOUNDLESS

DNS SECURITY

Unparalleled DNS-filtering protection
for Education Institutions

A SAFER WIFI ENVIRONMENT, **BETTER NETWORK PROTECTION**

Education institutions worldwide are facing huge cybersecurity challenges, as they become prime targets for malware, ransomware and other malicious attacks.

The wake of the pandemic has accelerated the digitalization of education, making school systems' security problems grow more acute.

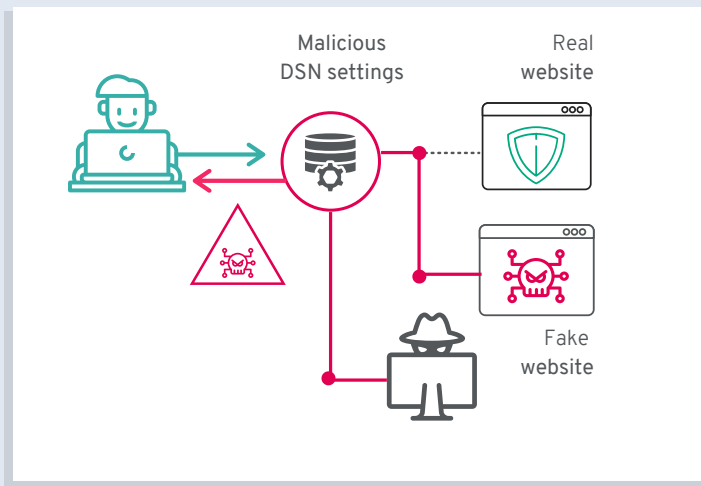

With students and teachers moving towards online education and remote learning tools, schools' network vulnerabilities are getting increasingly exposed to attacks.

This has accelerated making cybersecurity a priority for schools and universities, who must ensure they keep students privacy and data safe and secure.

The Boundless DNS Security offer helps education institutions fortify their students and organization protection against these threats by preventing attacks at the DNS-level.

Reinforce your network protection at the DNS-level with **BOUNDLESS DNS SECURITY**

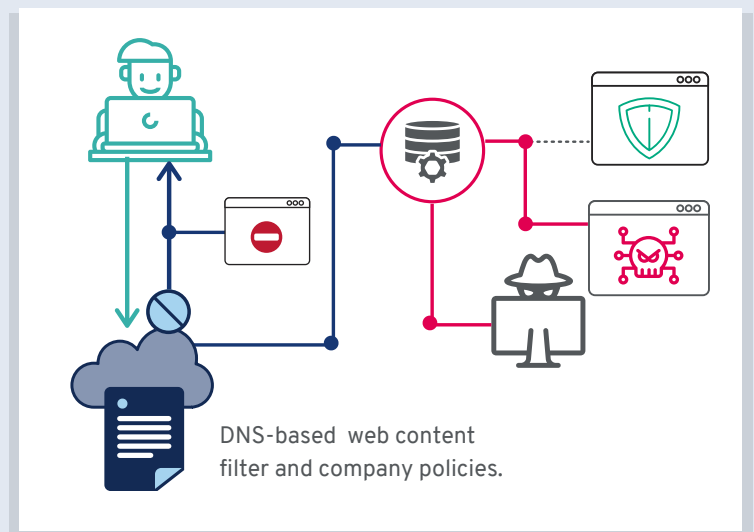

The DNS is a critical component of malware and phishing attacks today.

When a DNS gets attacked, the users looking for a specific website domain can get unknowingly redirected to malicious sites. Once there, their security may get compromised.

The Boundless DNS Security offer monitors and filters all webs requests made through your network or endpoint devices and applies your predefined policies to prevent online threats.

By enforcing web content filtering at the DNS level, the Boundless DNS Security offer controls the sites accessible through your network.

This way, it will block any malicious, compromised or inappropriate domains not allowed by your predefined security policy, before a connection is even established.

A complete DNS security offer to
FORTIFY YOUR NETWORK PROTECTION

The Boundless DNS Security bundle includes advanced web filtering solutions for your Guest WiFi and Remote Learning environments.

BOUNDLESS
GUEST SECURITY

Boundless Guest Security enhances your Guest WiFi protection against online threats and provides you more control over your public network.

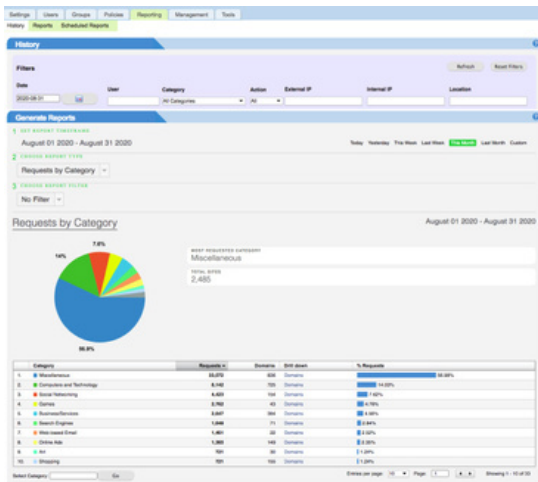

BOUNDLESS
ENDPOINT SECURITY

Boundless Endpoint Security offers advanced web-content filtering protection to devices used outside the firewall perimeter.

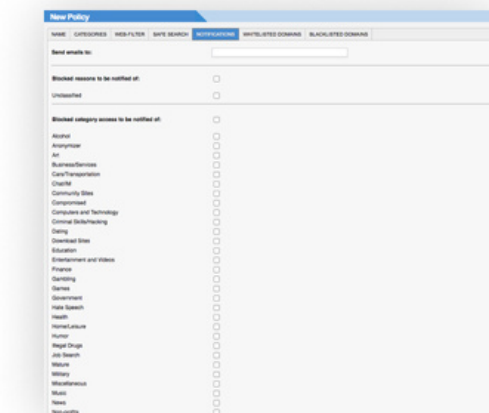

Provide a

SAFER GUEST WIFI ENVIRONMENT

Easy to deploy and manage

Simple to deploy on your client devices and easy to manage through a centralized dashboard.

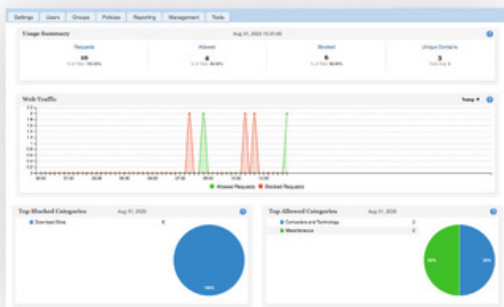

Real-time malware protection

Protect your network from phishing and malware attacks by blocking access to compromised websites, spyware and other malicious sites.

Unparalleled URL filtering

Real-time website URL categorization into 53 predefined categories, such as gambling, pornography, or hate speech.

More visibility, better control

Create customized policies for individuals and user groups, and monitor the DNS activity in real-time, regardless of the client location.

Complete set of
ROBUST FEATURES

**Strong Quality
Service**

High coverage of
the Active Web, and
no latency.

**High
Simplicity**

Fast to deploy and
easy to use, with low
training required.

**Granular
Categorization**

53 different website
category options and
customizable
categories.

**Customizable
Policies**

Easily create and
manage your own policy
to protect individuals
or user groups.

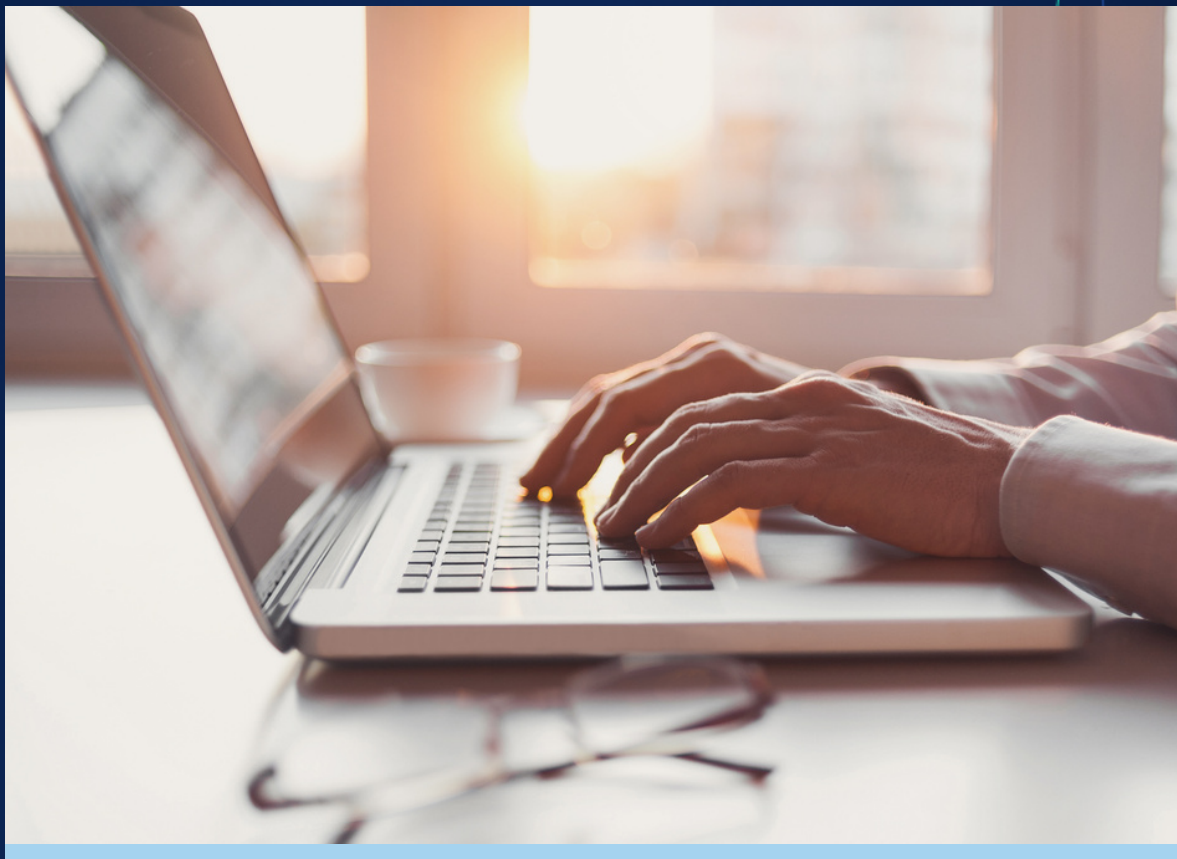

**Fast
Response**

Cloud-based
infrastructure that
overcomes hardware
limitations.

**Flexible
Pricing**

Affordable and
flexible licensing
model adapted to
all organizations.
