

The first no-code automation
platform designed for
MANAGED SERVICES

LEVEL UP YOUR MANAGED SERVICES WITH NETWORK AUTOMATION

Manual repetition, standardization problems, and slow response times, are three consequences of manual management, which can have severe consequences for Managed Service businesses.

Network Automation powered by Meraki APIs can eliminate these problems and transform the way your MSP operate.

By automating your Meraki networking infrastructure, you can quickly apply changes across your client's organization, reduce configuration drift, and eliminate the manual repetition that causes errors and slowness.

Not only that, API-based automation offers a unique opportunity for MSPs to efficiently and profitably expand their recurring revenue potential.

Boundless Digital has partnered with Cisco for over 7 years to bring to market API-powered automation solutions.

The Boundless Platform can help MSPs simplify and accelerate their network operations, provide more added-value to their clients, and open and expand business opportunities.

BOUNDLESS DIGITAL MSP PLATFORM

POWERED BY  Meraki

A MERAKI API-POWERED AUTOMATION PLATFORM BUILT FOR MANAGED SERVICES

The Boundless MSP platform for Meraki networks is an advanced automation solution designed to help MSPs increase their efficiency and productivity, by accelerating their NetOps.

POWERED BY  Meraki

Accelerate your NetOps With Enterprise-Grade Automation

By using the Meraki Dashboard API, the Boundless off-the-shelf platform fully integrates with any Meraki network infrastructure to automate the configuration, provisioning, and management processes.

Network Provisioning

Automate your network provisioning and turn a slow and error-prone process into a quick and effortless tasks.

Configuration Tasks

Deploy new, updated, or cloned configurations quicker, simultaneously, and at a large scale.

Management Operations

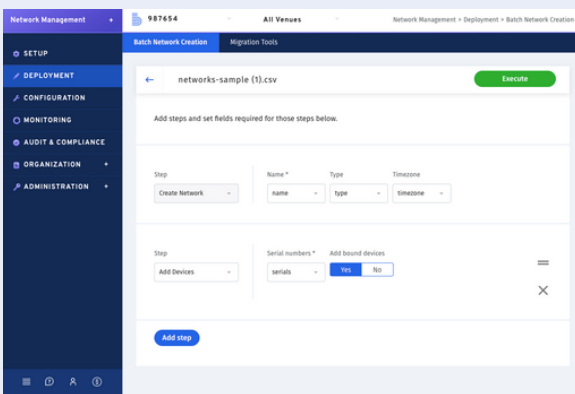

Accelerate your auditing and monitoring steps, allowing you to troubleshoot faster.

A UNIFIED PLATFORM WITH A COMPLETE SET OF NETWORK MANAGEMENT FEATURES

NETWORK MANAGEMENT

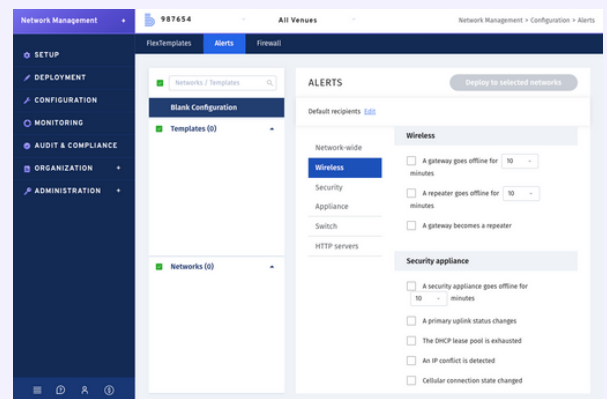

Batch Network Creation

Provision thousands of networks instantaneously, with no human error.

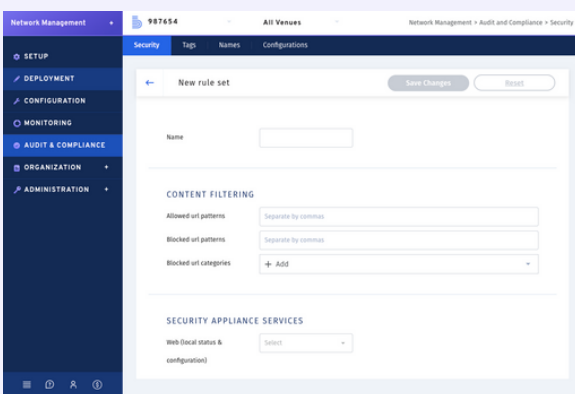

FlexTemplates

Get more flexibility to deploy batch configuration changes.

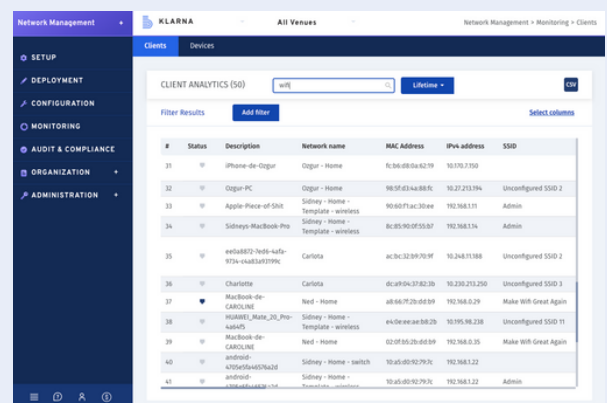

Audit and Compliance

Quickly audit large groups of network devices.

Monitoring

Widen your visibility to monitor your client devices and troubleshoot faster.

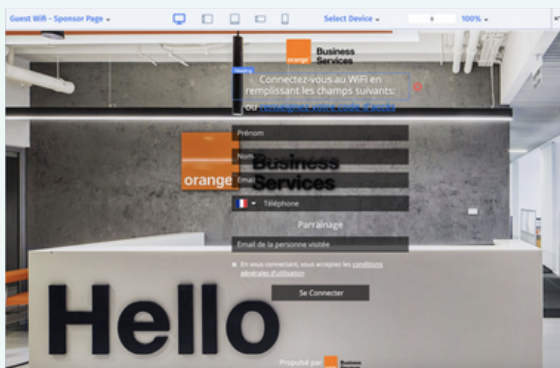

INTEGRATES ADVANCED AND SECURED GUEST WIFI SERVICES

CAPTIVE PORTAL

Boundless Guest

Unleash the myriad of opportunities Guest WiFi has to offer.

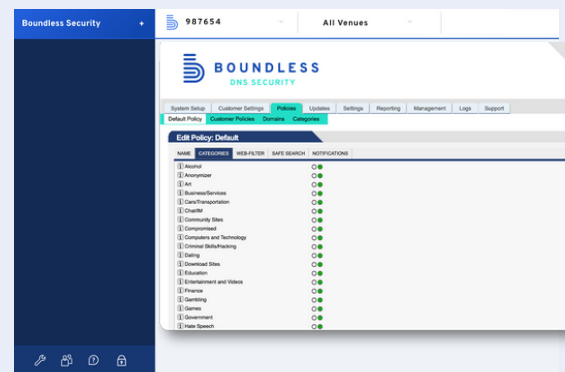

- Consistently configure and deploy WiFi captive portals in a few clicks
- Customize splash pages with an intuitive page builder
- Choose among the multiple login methods available, including social login, SMS, and ticketing
- Track network usage and collect insightful user data

Boundless Guest Security

Protect your Guest WiFi with an advanced web content filter.

- Configure and deploy a company-compliance security policy across multiple Guest WiFi networks
- Apply Cloud-content filters to control the content accessible from your SSID
- Download network usage reports

A PERFECT FIT FOR MODERN MANAGED SERVICES

Multi-tenant architecture

Single access point for the management of multiple organizations.

Custom dashboards

Customize the dashboard to provide personalized access levels.

Role-based access control

Creation and management of roles and access levels for different profiles.

SSO security

Secure SSO authentication to simplify account management.

Log management

Centralized log collection, aggregation for long-term storage.

Knowledge base

Access to technical guidelines, and FAQ documentation.

AUTOMATION ISN'T SOMETHING YOU NEED?

HERE IS WHAT YOU ARE MISSING

50x FASTER PROVISIONING

Deploying thousands of networks manually usually takes hours.

With the Boundless MSP platform, you can get it done automatically in a matter of minutes, saving a great amount of hours and reducing the risk of manual errors.

DEPLOY 100 SITES

MANUALLY

8 hours

WITH BOUNDLESS

3 minutes

MONITOR 500 SITES

MANUALLY

45 minutes

WITH BOUNDLESS

10 seconds

10x LOWER MTTI

Identifying an issue and locating the client source in organizations with over 500 networks can be a time-consuming and tedious task. Boundless MSP accelerates this process to just seconds, consequently, improving your overall MTTR.

40% REDUCTION ON MANUAL OPERATIONS

Let's say you have to run bulk config changes on dozens of sites simultaneously, setup external guest WiFi services on a hundred sites, and audit configuration settings on all your networks.

Accomplishing all these tasks could easily take your team a full working day. Using the Boundless MSP platform it would just take you a few minutes. As a result, you'll accelerate your NetOps and free up your teams for more strategic tasks.

AUDIT CONFIG SETTINGS ON 60 SITES

MANUALLY

4 hours
